All donors listed above have demonstrated negative serology and/or virology for VDRL, Hepatitis antigen (HBsAg), Hepatitis core antibody, Cytomegalovirus, Mycoplasma hominis/Ureaplasma urealyticum, and HTLV-III antibody. It is our policy, in keeping with the American Association of Tissue Bank Standards, to maintain a recommended quarantine period in order to re-evaluate each donor for the HTLV-III antibody. We will notify the physician if the requested donor specimen has not met the quarantine requirement. Donor specimens are examined for Neisseria gonorrhoeae and negative cultures are obtained prior to shipment. Donor chromosome analysis, performed on peripheral blood is available upon physician request. Cryogenic Laboratories, Inc. routinely maintains an inventory which is normally sufficient to meet most requests. We cannot however, guarantee the immediate availability of semen specimens from each donor. To request donor semen, complete the Donor Semen Request form and forward to Cryogenic Laboratories, Inc.. We will then return to the physician, the Donor Semen Profile and Donor Medical Profile. Please feel free to request donor specimens by calling Cryogenic Laboratories, Inc..
